

Features & Functionality

Add Review - users (Individuals or Businesses) can add a Review of another user (Individuals or Businesses). The Review can contain several rating axes, such as Loyal, Friendly, and Reliable. Each axis can be given a 1 through 5-star rating. The overall Review score is the average of these ratings. Or the Review can be reduced to a single star rating (1 through 5). This is controlled at the platform level and is Role-specific. The Friend Role may have different rating axes than the Neighbor Role. In addition to the Objective Rating Score, a user can add comments to a Review (max. 256 characters), as well as add/attach files or images. This Review is posted to the Reviewee's ME page and user Profile. This review is initially posted at the top of the user's Reviews. It is also blurred until a user clicks on the Review.

Annual Billing - Each Plan (Personal and Business Plans) is displayed on the website and in the application with either Monthly or Annual billing rates. If the user selects Annual Billing (or Pricing), the annualized total cost of the chosen plan is discounted by ten percent (10%) from the Monthly billing rate(s). This provides a discount for the user and a prepayment or accelerated cash receipt for tiipstr, LLC.

Attach File/Document - In Reviews, Comments, Posts, and Messages, any file type can be attached to the respective event. These files include, but are not limited to: *.xls, *.docx, and *.pdf, as well as other standard document file formats.

Attach Image - In reviews, comments, posts, and messages, any image type can be added to the respective event. These files include, but are not limited to, the following formats: *.gif, *.png, *.jpeg, *.svg, *.bmp, and *.pdf, as well as other standard image file formats.

Auto-Renewal - The paid plans for personal Profiles are Monitor, Engage, and Control. For Business Profiles, the paid plans are Business, Business Plus, and Enterprise. Each of these plans can be set to auto-renew on a Monthly or Annual basis for the corresponding subscription fees.

Business Plan (Business Profile) - Business Plan is the entry-level paid plan for businesses in tiipstr. As with all business plans, a company is registered by a user who has a Control Plan or Professional Plan (individual Plans/Profiles). The registered business utilizing this basic Business paid plan can register their business and receive and post Reviews of individuals and other companies. All Business paid plans require being certified via KYB and will have an e-wallet provided by Adroit DRX. The Business Plan features robust components (Reviews, comments, tiipstr, Groups, etc.), including a Business Score, People Score, and Culture Score. These scores enable a business to differentiate itself from its competitors, not just in the competition for customers and market share, but for employees and other business partners.

Business Plus Plan (Business Profile) - Business Plus is the mid-tier of paid Business plans. It includes all features of the Standard Business Plan as well as access to the industry-disrupting xChange advertising campaign feature and other added functions and features.

Business Score (Business Profile) - There are three (3) scores a business is capable of having and/or displaying. Business Score is foundational to the business's products and services. Customers, vendors, and others can review them. Any Review received by a Business is added to its Business Score. This is a traditional social media review, such as Google Reviews, Yelp, and Facebook Reviews, etc. As with all Reviews in tiipstr, these Business Score Reviews can be sorted and filtered by the Reviewed As Role.

Ad Campaigns (or Campaigns) - Campaigns are associated with the xChange functionality. A Campaign is an advertising campaign (or ad) that is built and deployed by an Individual or Business. These campaigns are built using various hurdles or attributes of the target audience, as well as campaign spend. They are delivered via a user's tiipstr feed. Users can modify their xChange settings to determine whether they would like to participate in receiving xChange Ad Campaign advertisements. Under the xChange feature, ad recipients receive (via their e-wallet) compensation for various activities or behavior as they interact with the ad. This includes payment for clicking on an ad, reviewing a video, submitting a form for an estimate/contact, or leaving a comment or like, among other actions.

Community Sentiment - Every posted Review includes a "thumbs up" and "thumbs down" icon, allowing users (except the Reviewer) to express their sentiment about the Review. A count of each "thumbs up" and "thumbs down" is also displayed. This allows users to easily gauge the prevailing sentiment of the Review.

Control Plan (Personal Profile) - The Control Plan is the highest level of Personal (Individual) Profile paid plans, offering a robust set of features and functionality. It includes all the features and functionality of the Enagge Plan, plus many valuable features, gadgets, and functions that enable users to manage their reputation effectively. Many functions and features are either not visible to the user without this level of paid plan, or are visible (grayed out) but non-functioning. Also, a user must select this paid plan (or the Professional Plan) before they can add any Business paid plan. When a user attempts to engage a feature that is not in their plan, they are notified with a pop-up prompt to upgrade to a plan that allows their attempted activity (such as Pin Review). This upgrade is instantaneous upon successful payment of the upgrade fee.

Culture Score (Business Profiles) - The Culture Score feature enables Business Plan users to add employees/owners to a Business Profile. These users can then anonymously provide a Culture Score of the company on a scale of 1 to 5. The aggregate of these Culture Scores will be averaged and posted as a Business's Culture Score and displayed on that Business's Me page and user Profile page. Depending on the level of the Business Plan, a business can elect to hide or show this Culture Score. This score can be used internally for numerous purposes, as well as by vendors, customers, prospective employees, investors, and other stakeholders to assess the company's culture and evaluate management's effectiveness.

Dashboard - The Dashboard is the default page a user sees when logging on to the Platform. The user sees a left navigation column that can be expanded and collapsed, and includes Me (Default - Personal), Chat, Followers, Following, and Wallet (e-Wallet). In a separate (lower) left navigation field, additional navigation opportunities are available, such as Marketplace, Services, MyBinz, Help, and Logout. It also includes a Profile Selector, allowing users to switch their Profile (from, for example, Personal to Business or Professional). In the upper right-hand corner of the Dashboard, there is a Search Bar, an "Invite user" icon, and a "Notifications" icon. Additionally, the user's Profile Image is also present, which, when clicked, displays a drop-down menu including "My Profile," "Settings," "My Plan and Billings," and "Logout."

Digital Wallet or e-Wallet (ADRX) - As part of the account creation sequence, every tiipstr user is assigned a digital wallet. This e-wallet is provided by the affiliated company Adroit DRX, LLC. This e-wallet can on-ramp and off-ramp funds to the user's fiat bank account through an integration with Plaid. It can be used to pay monthly subscription fees and receive funds from participation in the xChange feature.

Enterprise Plan - The Enterprise Plan is the top-tier of paid Business plans. It includes all features of the Business Plus Plan as well as access to integration with Hubspot CRM and tiipstrs robust API. These integration features and utilities enable a business to exponentially accelerate its interactions with customers and prospects, as well as seamlessly create advertising workflows based on a two-way data flow between the tiipstr platform and third-party and proprietary CRMs and ERPs.

Engage Plan (Personal Profile) - The Engage Plan is the mid-tier Personal (Individual) plan. It includes all the features in the Monitor Plan, plus many more features and functions to empower users to start interacting and engaging their reputation in a meaningful way. This is accomplished by enabling users to pin reviews on their Me page and user Profile page, select and filter notifications, and participate in Social Credibility Score improvement features and programs.

Following - Following is a feature that allows users to follow other users. If a user follows another user, that user will be listed under “Following” on the left navigation of the user’s Dashboard. The users being followed by you appear as tiles, which include the user’s name, Profile Image, Social Credibility Score (and Count), Add Review button, State/City, and phone number and email (obscured if the user designates their contact information as Private). This allows the user to easily access the users they are Following. Additionally, depending on the level of paid plan, a user can elect to receive notifications when any of the users they are Following receives a Review. They can also select “Unfollow” to remove this user from the Following list.

Follow Anonymously - Depending on a user’s paid plan level, they can follow another user anonymously. Typically, any user can follow any other user; no permission is required to follow. And while anonymous following still requires no permission, if a user wants to follow another user without the other user knowing they are being followed, they select “Follow Anonymously” when choosing to follow another user.

Followers - Followers is the list of users who are Following you. This is displayed on the left navigation as Followers. This allows a user to see who is following them. However, based on the respective user’s paid plans, a user may anonymously follow another user. The users Following you appear as a tile which includes the user’s name, Profile Image, Social Credibility Score (and Count), Add Review button, State/City, and phone number and email (obscured if the user designates their contact info as Private). This allows the user to easily access those users whom they are Following.

Friends - Friends is different than “Following” another user. To be “Friends” with another user, that user has to designate another user as such, or accept a Friends Request from another user. Being a “Friend” provides additional features and functions, including visibility of a Friend’s tiptok feed, being able to post on Friends’ tiptok feeds, and your Friends’ Social Credibility Scores contributing to your “Friends’ Score.”

Groups - Groups are designed to allow users to create Groups or Communities with common interests. Groups are only available to Control or Professional users (and all Business Plans). Users can create Groups and use Social Credibility Scores as hurdle rates for entry or remaining in the Group. Each Group has a Member’s Only tiptok feed.

HubSpot Integration - tiipstr has developed an API that enables its users to integrate with their HubSpot CRM account (available only to users of the Business Enterprise paid plan). This allows instantaneous access and functionality for a business to push/pull data between tiipstr and Hubspot. First, it will enable a Business to invite a user or Review user using their imported customers, prospects, vendors, and other contacts. Next, it supercharges HubSpot’s automations and other tools using data from tiipstr, such as a customer or prospect’s SCS, which of their customers are friends with their other customers and prospects, and whether these tiipstr friends have provided good Reviews of the Business. This would exponentiate the social proofing when marketing and sequencing a prospect through the sales journey.

Invite (Add) New User - If a user searches for a name, number, or email and doesn’t find a matching user, they can utilize the Invite New user feature, located in the upper right corner of the user’s Dashboard. By selecting this icon/button, the user is prompted to enter the desired new user’s Name, Email, and Phone Number. They can also do a contemporaneous Review upon adding a user.

KYB Verification (Business Profiles) - All users must first create a Personal Profile and undergo KYC verification. If they would like to add a business (and a Business Profile), they must enter the appropriate business identifying information: TIN, State of Registration, Entity Number, Date Formed, State, and type of entity. They must also attach certain formation documents, such as an SS-4 letter from the IRS or a Certificate of Good Standing from the Secretary of State (SoS). This info is verified against various databases (as well as manually reviewed) to ensure data integrity and accuracy. If a business passes (verified) KYB, they are identified in the platform with a distinct badge on its public business profile. This allows a KYBd user to select a paid Business Plan (Business, Business Plus, or Enterprise) and unlock the robust features offered to businesses by tiipstr.

KYC Verification (Personal Profiles) - All tiipstr users must pass KYC identity verification through our security partner Persona. As part of account creation, even in the free version, a new user must submit basic (encrypted) PII. This includes your legal name, YoB, address, phone number, and email address. This is verified against various databases to ensure data integrity and accuracy. If a user passes (verified) KYC, they are identified in the platform with a distinct badge on their public profile. This allows a KYCd user to select a paid plan and unlock the powerful features offered by tiipstr. If they do not choose a paid plan, they are still identified as verified on their profile. Without a paid plan, users can be reviewed by others; however, the free plan does not allow them to post reviews, view who has reviewed them (or the content of the review), respond to the review, or take any other action regarding their reputation.

Legacy Social Media Listing - Users can provide the URL to their other social media accounts. This includes Facebook, Twitter/X, Instagram, and LinkedIn. If they have added these links to their Settings, the respective icons will be displayed on their Public Profile. Other users will be able to click any of these icons to be navigated to the respective user's legacy social media account/profile/page. If a user adds three of the 4 URLs, their Social Credibility Composite Score will be boosted by 0.1 (not to exceed 5.0).

Marketplace - Marketplace is a work in progress. Generally, Marketplace will function like most marketplaces for goods & services. However, in tiipstr's Marketplace, you will be able to evaluate a Buyer or seller's social credibility score, SETLD Credit Score (from SETLD financial transactions), transact through your ADROIT DRX e-wallet (receive funds, pay funds), filter buyers and sellers by their SCSs, and many other features.

Messaging / Chat - Users can message/chat within the platform through the Chat feature. This utility is included in the left navigation of the user Dashboard. These conversations can be with an individual user or a group Chat. The chat feature supports typed text, voice memos, and file/image attachments. In addition to user-to-user chats, many in-app notifications appear in the Chat. Each user's Profile page has a convenient Chat button to initiate a chat with that user.

Mentioning - Users can use the "@" symbol in Reviews, Comments, Responses, Replies, and tiipstr posts. This feature will add the desired mentioned user in the content being posted. The mentioned user will receive a Notification (in-app) that they have been mentioned. They can click on the Notification and be navigated to the relevant content.

Monitor Plan - Monitor is the bottom-tier Personal paid plan. It includes numerous features that enable users to monitor their reputations effectively. However, as the name suggests, this plan is designed to allow a user to monitor their reputation without some of the features and functionality of the Enagge and Control plans, which provide for heightened engagement and control of a user's social credibility.

Monthly Billing - tiipstr is a subscription-based model. A user can sign up for either Monthly or Annual billing. If they select the monthly subscription, their e-Wallet (if sufficient funds) or credit/debit card will be charged on their monthly billing date. They can cancel their subscription at any time. However, no refunds are made. If a user cancels their subscription in between billing cycles, they will enjoy the platform until their next billing date (at which time they will not be billed and lose access to their reputation).

Multiple Profiles (Personal, Professional, Business) - A user can have multiple Profiles. These include a Personal Profile, a Professional Profile, and a Business Profile (multiple Business Profiles). On the user's Me page and user Profile page, a user can select from a drop-down menu any available user profile. If the user only has a Personal Profile, that will be the only listed choice. As soon as a user selects a different Profile than the one currently being displayed, the new Profile and associated data are rendered. If a user selects their own Profile, in addition to the Profile data switching, any action they take on the platform will emanate from the new, selected (current) Profile.

Notice & Communication Settings - On the user's Dashboard, their Profile logo appears in the upper right-hand corner of the frame. It includes a down carrot that, when clicked, displays numerous administrative options, including "Settings." When a user clicks on Settings, they are directed to a page with numerous settings options, including "Notification Preferences." Here, a user can select what notification methods they want for numerous acts or activities. For instance, they can elect to be notified of a Review of them by email, text/SMS, and/or in-app. The Control paid plan has the most flexibility in Notifications Preferences. In Settings, users can also set their tiipstr preferences and numerous other administrative settings.

Paid Plans (Business) - There are three (3) levels of Business Profile paid plans. Business (\$14.99 per month), Business Plus (\$24.99 per month), and Enterprise (\$39.99 per month). All Business plans are feature-rich with core tiipstr functionality. Business Plus includes People Score and Culture Score, while Enterprise provides integration capabilities for HubSpot and APIs with proprietary ERPs and CRMs.

Paid Plans (Personal) - There are three (3) levels of Personal Profile paid plans. Monitor (\$1.99 per month), Engage (\$3.99 per month), and Control (\$5.99 per month). As the names suggest, the progressive plans allow for more dominion over your reputation. As the plans progress, more features, capabilities, and options are available. These paid plans have monthly subscription rates and can be paid by credit card, debit card, ATH, or digital wallet (ADRX e-wallet).

Paid Plan (Professional) - The Professional Plan (\$7.99 per month) includes the Control Plan (Personal Profile) feature set, as well as additional features and functionality tailored to the user's profession. This includes entering/selecting the specific profession title (e.g., Doctor, Engineer, Hairdresser, Lawyer, Web Developer, Architect, Roofer, etc.) as well as any professional designations, degrees, licenses, or other accolades associated with this profession. Many of the features available or related to the Personal Profile Plans are also specifically and separately available by and between Professionals. For instance, an Individual, Business, or Professional may review another in their Professional role or capacity. This Review can be by a Professional, of a Professional, or any other combination of Reviewer/Reviewee.

Password Reset - Users can reset their password by clicking on the “Reset Password” link on the login page. They are asked whether they want 2FA by text or email, and enter the appropriate contact information. If the phone or email is associated with an account, it will send the OTP. This is entered on the screen for this OTP input. If the OTP is correct, they are prompted to change their password and redirected to the login page. If the number or email is not associated with an account, no OTP is sent, and the reset is terminated. For safety and security purposes, the prompts/messages do not indicate whether the number or email is associated with an account.

People Score (Business Profiles) - Only Business Plans have a People Score. When a Business creates its Business Profile (or wants to edit its Settings and Profile), it can add all of its employees. This feature allows a Business to identify and review every employee's tiipstr SCS and Reviews. The People Score is the composite SCS of all of the Business's employees and is displayed on the Business's Me page and user Profile page. Depending on the paid plan level, a Business may have the ability to share or hide this People Score from their user Profile page. This People Score is another data point for other users to consider when determining whether to do business with this company. It can also be used internally for HR, compensation, and other corporate concerns.

Phone Number and Email Verification - As part of the initial digital verification, a user must respond to an SMS that includes an OTP. If the user enters the correct OTP, their phone number is marked as verified in their profile settings. The exact process is used to confirm/verify their email. The onboarding user receives an OTP via email. If the user enters the correct OTP, their email is marked as verified in their profile settings (and on their Public profile(s)). This ensures an additional layer of identity accuracy and integrity.

Post Creation (tiptok) - tiipstr's social media feed feature is called tiptok. Users can add traditional social media posts, including text narratives, images, videos, and user tagging. Tiptok is displayed as a tab on the Me page or the user Profile Page. Once selected by a user, the respective tiptok feed will be displayed in frame.

Post Filtering - Posts are made on a tiptok feed. The default view is labeled "All Posts" and displays posts chronologically with the most recent Post at the top of the list. A user can filter by selecting "My Posts," which filters all Posts except for Posts made by the user. Users can also mark any Post as a "Favorite" and filter these by selecting "Favorites."

Private / Public Contact Information - Within a user's settings, they can choose (at any time) to mark their contact information (email and phone number) as Public or Private. This is accomplished via a toggle button. If they mark them as Public, their Social Credibility Composite Score is boosted by 0.1 (not to exceed 5.0).

Profile Selector - A user who has multiple Profiles (Individual or Personal, Professional, and/or Business) will have on their Me Page (and their user Profile Page) a drop-down Profile Selector. This is where a user can click on the drop-down and select the Profile they are interested in displaying. As soon as a different Profile is selected, ALL displayed data switches to the selected Profile. If it is a user selecting their Profile, not only will they see that Profile's data, any function they perform (posting a Review, commenting, adding a tiptok post, chatting, etc.) will be done and displayed as being generated by that Profile.

Report Review - Any Review, Comment, Post, or Reply is capable of being reported and flagged as violating the Community Standard(s). Upon a user flagging content that they believe is inappropriate, the content is IMMEDIATELY blurred and placed in an Administrative Queue for review and determination. If it is determined that the content violates community standards, it will be removed. If it is a Review that is removed, the Composite Social Credibility Score will be calculated (Average and Count) without such Review data. Otherwise, the content will be restored.

Review Comments - On every Review, users can post text comments (limited to 144 characters). In addition, replies can be made to Comments. This can provide community sentiment and feedback on a Review, be it positive or negative. These Comments and Replies provide context for the review and possibly alter how another user perceives the Objective Review Score (1 through 5).

Review Count - The Review Count is simply the number of Reviews received by a user in a particular Profile. For instance, if a user has the Control paid plan (Individual Profile), the number of Reviews received associated with the Individual will be displayed parenthetically next to the Composite Social Credibility Score. If they have a Professional and/or Business Profile, these Profiles will have their own separate and distinct reviews, including Review Count data. This Review Count is displayed in totals (all time), but can be viewed graphically over weekly, monthly, and annual time periods. The Review Count can be used by other users for various purposes, including assessing the reliability of the Social Credibility Score, determining a user's popularity, and many others.

Review Editing - A Review is capable of being edited, but will be annotated as such (i.e., "edited 10/03/25 24:38:12"), including the date and time of the edit. Users on the Control, Professional, Business Plus, or Enterprise paid plans can hover over the "edited" annotation to view the original version.

Review Filtering (Roles) - Every Review requires a Role to be selected by the Reviewer. These roles (for Personal Reviews) currently include Friend, Neighbor, Mentor, Acquaintance, Landlord, Tenant, Coworker, Customer, Family Member, Service Provider, Vendor, etc. On every user's ME page and user profile pages, the Composite Social Credibility Score is displayed. The Review Filtering allows the actual Reviews to be filtered by Role. In addition to just seeing Reviews for the filtered Role, the Social Credibility Score for that Role is calculated using just those reviews. This is helpful if a user is particularly interested in the score of a user as a Coworker, but isn't concerned about that coworker's Neighbor score. It is a more granular score and can be used as the user sees fit.

Review Likes / Dislikes - Every posted Review includes a "thumbs up" and "thumbs down" icon, allowing users (except the Reviewer) to express their sentiment about the Review. A count of each "thumbs up" and "thumbs down" is also displayed. This allows users to easily gauge the prevailing sentiment of the review.

Review New User - While users can search for other users and Review an identified user, they can also Add/Invite or Review a New user through a button in the upper right header of the Dashboard.

Review Notifications - Every Review generates multiple notifications. While these Notification settings can be adjusted/suppressed by a user, they will be delivered unless a user turns off notifications. Only under the Control paid plan can a user turn off or dictate which notifications they receive and by which mode (email or text/SMS). Users on the Control paid plan can also apply Notification Rules, such as being notified only of Reviews with a score of 3 or less. In-App Notifications cannot be suppressed. Also, the timing and content of a Review Notification are dictated by the Reviewee's Plan type. For instance, unpaid Plans will distribute both email and SMS notifications, but the content may be truncated or limited.

Review or Post Reporting - Every user, even those not on a paid plan, can flag a Review, Comment, Response, or Post as a violation of tiipstr's Community Standards. Once flagged/reported, that content will be blurred out and marked with an "Under Review" tag. In tiipstr's Admin Dashboard, tiipstr personnel manually review each flagged content for numerous possible violations. If the content is deemed inappropriate, it will be permanently removed; otherwise, it will be unblurred and be available for public viewing.

Review Pinning - A Control, Professional, Business Plus, or Enterprise paid plan user can Pin a review on their ME page (a Review of them) or another user's Profile (A Review of that user). For a user who wants to pin a Review on their Profile (ME Page), there is a flat fee of \$24.99. This Review will be pinned in perpetuity until the user unpins or chooses another Review to Pin. If they choose a new Review to Pin, an additional fee of \$24.99 will be assessed. It will always be at the top of the list of that user's Reviews (regardless of whether another user pins another Review of that user). The pinned Review by another user on your ME page and user Profile Page will be ranked/listed directly below any self-pinned Review (if applicable) and has a predetermined duration (and cost). Upon identifying and selecting the Review to be pinned, the user must choose the length of time that the Review will be pinned. They may select 24 hrs., 72 hrs., or 1 week. The duration of the pinned Review dictates the in-app purchase price. The fees are as follows: 24 hrs. = \$1.99; 72 hrs. = \$4.99; 1 week = \$12.99.

Review Response - A Review Response is a Response to a Review by the Reviewee. These Review Responses are different than Comments on a Review. They are always pinned under the Review regardless of how many Comments are made on the review by Other users. Depending on the paid plan type, a Reviewee may be offered an opportunity to provide a Response to a Review before it is initially posted. This feature would allow contemporaneous posting of the Review and the Reviewee's Response.

Review Roles - When creating (adding) a Review, a Reviewer must include specific information. At a minimum, the Review must consist of the Role in which the Reviewer is reviewing the other user (Reviewee). Depending on what type of Profile one is posting the Review from (Personal/Business), the Roles available for review may differ. For instance, a Personal Profile reviewing another user as an individual will display a number of possible Roles, such as Acquaintance, Friend, Coworker, Family Member, Neighbor, Tenant, Landlord, Mentor, Spouse, or Partner, among others. For a Business Reviewee, the Roles include, but are not limited to: Customer, Prospect, Vendor, Buyer, Supplier, Partner, Collaborator, Stakeholder, etc. This feature allows more context behind the Review and enables other users to sort and filter Reviews by the Roles they deem relevant for their particular purpose.

Review Sharing - Reviews in tiipstr can be shared to multiple legacy social media platforms. These include Facebook, Twitter/X, and LinkedIn. If a user is already logged into one of these other platforms, they will be navigated to a pre-filled post entry for that platform. The post entry will include an image of the Review with "See [user's Name - Reviewer] Review of [Other user's Name - Reviewee]." When any user of the other platform to which the Review was shared clicks anywhere on the post (Review), they are navigated to tiipstr for Login and/or Sign Up. If they are already logged into tiipstr, it will navigate directly to the Reviewee's Profile Page and the posted Review.

Review Sorting (Chronologically) - Reviews are listed chronologically (Newest to Oldest) by default. Review Sorting allows a user to sort chronologically, Newest or Oldest first. And if they have been filtered by Role, it will apply and sort only those reviews chronologically, as selected by the user.

Review Sorting (Social Credibility Score) - Reviews are listed chronologically (Newest to Oldest) by default. This includes all Reviews, all Roles. However, a user can select to sort by "Rating." This sorts and displays Reviews based on Review Score. A user can click on the "Rating" button to toggle (sort) between Highest to Lowest Scores or vice versa. This is a typical feature that allows users to see the highs and lows of a particular user (commonly used for product reviews on other platforms, such as Yelp, Google, and Amazon).

Review Stats - On a user's ME page and every user's profile page (Personal, Professional, or Business), a small graph icon is visible, which can be clicked for Review Stats for that user. These stats are the count and average review scores. This can be displayed on a Weekly, Monthly, or Annual Basis. These statistics are presented in both numeric and graphical displays. This feature allows users to view frequency, velocity, trend, and other insights into their (and others') social credibility over time.

Search Users - On various screens, including the user's central dashboard, users can search for other current and past users through a search bar. They can enter a name, phone number, or email. If any of these are identified as current or past users (with paid or unpaid plans/profiles), a list of all users with this information will be displayed. A user can then select one of the users to determine if this is the user they were searching for. Upon confirming this is the desired user, they can click and navigate to that user's profile page for further action.

Social Credibility Score (SCS)(Personal)(Composite) - This is at the heart of the platform. It is digitizing a user's reputation. It is creating their social and human currency by compiling Reviews of that user by others. The Social Credibility Score is the average of all review scores for that user. These Reviews can be for any number of Roles, such as friend, neighbor, coworker, acquaintance, tenant, etc. Reviews, regardless of the number of axes used (Friendly, Loyal, Reliable), result in a score of 1 through 5. While a user can filter their own or another's Social Credibility Score by Role, the Social Credibility Score displayed on a user's ME page is the composite of all review scores, all Roles.

SSO - Users can sign on to tiipstr and its companion digital negotiation app (SETLD) with a single login credential set. Once signed into either app (web or mobile), the user can switch between apps without having to re-sign in. Users can sign in with a username (email or phone number) and a password, or they can sign in with their Gmail account.

tiiptok - <https://tiiptok.com/> tiiptok is tiipstr's social media feature. tiiptok is a conventional social media and networking platform where users can share, comment, banter, and socialize on a wide range of topics, events, people, and places. Users have control over who can see or interact with their timeline through their settings and by designating certain people as "Friends" or "Connections."

Two-Factor Authentication (2FA) - All login attempts will generate a 2FA one-time password, or OTP (a four-digit number). This is delivered to either the registered phone number or email (depending on which one a user selected to log in with). Accurate entry of this OTP will allow application access and direct the user to their Personal Profile Me page. The OTP times out after sixty (60) seconds. If it is not entered within the allotted time, the OTP will not be valid, and the user must request a new OTP.

Upgrade / Downgrade - All paid plans are billed in advance. A user starting a monthly subscription on January 1, 20XX, will be autobilled on February 1, 20XX. If a user downgrades during a subscription period, they will retain the features of their current plan until the next billing period, at which time they will be billed at the downgraded plan price. If a user wants to upgrade, they receive a credit for any unused amount on their current plan and are billed the difference. This upgrade date will now start their new billing period date. Future auto-billing will occur at the full price of the upgraded plan.

User Bio - All users may include a bio of up to 72 characters. A short phrase or statement about them: they can do this for their Personal Profile, Professional Profile, and for any Business Profile they create.

User Profile Page - A user Profile Page is what other users see when they navigate to a user's profile. It is essentially the user's Me Page without some of the functionality and features of the Me Page. It includes their name, contact info (if the user has set their contact info to Private, it only displays the last four digits of their phone number and the first four digits of their email address), Location (State), SCS, Friend's Score, legacy social medial icons (linked to that user's respective SM account), Edit Profile button, Plan details button, and infographic of Reviews (Score and Count).

User Profile Image - users can add a picture or other image to their Public Profile. Profile Images are always public.

user QR Code - Each user is given a QR code that is readily displayed on their profile for easy scanning and identification. This allows users to easily follow, review, and connect with any other user by simply scanning this QR Code.
