

xChange Feature in tiipstr

xChange is a feature inside of **tiipstr** that will regulate and monetize advertising on the platform. At its core, x+change reallocates advertising dollars to the advertisement's recipient/viewer/target. This contrasts with the current advertising paradigm, where the social media or digital platform retains 100% of the initial advertising revenue. x+change will allow and/or encourage users to turn this feature on/off, set their rate (\$) for various actions (view, watch, post, act), receive compensation for their access and action, and provide 100% advertising attribution and efficiency to the advertiser.

The following is a narrative of some of the features and benefits of x+change:

1. All tiipstr users will be able to turn the feature on/off instantly (in their Settings).
2. All participants (prospect and advertiser) must be KYC/KYB.
3. A Cybrid account (SETLD) is mandatory for all participants.
 - a. Transactions will be conducted through Cybrid Wallet (Book Entries). This digital wallet is automatically created upon sign up and KYC/KYB. Transfers between Advertiser's digital wallet and the advertisement recipient is instantaneous upon completion of triggering compensable event (clicking on ad, viewing video, filling out form, making a comment, booking an appointment).
 - b. Fees will be split between the Advertisement target and tiipstr. Users will receive 80% of their preset rate (in their Wallet); 20% will go to tiipstr's Wallet.
4. Advertiser will create a Campaign with certain parameters.
 - a. Spend Amount, Hurdle Rate, Filters (Age, State, etc.), and MaxPer (max fee to any individual user).
 - b. Advertisers will then create their desired posts (text, links, videos, scheduler, videos, etc.).
 - c. The Advertiser will authorize/submit the Campaign.
 - d. Campaign will stay active until the Campaign Spend is exhausted or the Advertiser terminates the Campaign.
5. Users will set their x+change preferences (on/off and rates).
6. The Campaign will deliver advertisements to users' TiipTok feeds.

- a. When the ad is initially displayed, only the name and rating of the advertiser will appear. The rest will be blurred or obscured.
 - b. When the user clicks on the blurred image/ad, it will be displayed without obscuration. This entitles them to the rate that they set for "View."
 - c. At every successful event (View, Watch, Post, form fill, schedule appt, comment, etc.), the related fee will be distributed to the respective user's account and tiipstr's account (80/20 User/tiipstr) instantaneously.
7. Once the Campaign has exhausted its spend (or the Campaign has been terminated by the advertiser), any unviewed ads will be no longer be compensable (but still able to be viewed and excited upon. This places urgency or a temporal imperative to view or act on an ad (so as t o be compensated).

Requirements/Parameters to Build an Xchange Campaign:

1. Campaign Name
2. Auto-assigned Campaign Number (25-0000XXXX)
3. Max Dollar Value of Campaign (Desired Spend - \$5,000.00)
4. Profile Targets (Personal, Professional, Business, Groups)
5. *Composite Score Hurdle Rate (Personal, Professional - Composite Score, Business Score, Group - People Score).*
6. State (Zip Codes)
7. Age Ranges 18-34, 35-54, 55-64, 65+
8. Payment Amount for Action (Post - \$0.25, Watch Video \$0.50, Click on Link (Form fill, Website, or Marketplace - \$0.75), Comment - \$0.15, Share - \$0.15.
9. Post Content (Images, Videos, Copy, Clickable Links (to website, form-fill. Tiipstr marketplace.

Required features:

Users must be able to share.

Users must be able to save as a Favourite.

Users must be able to report.

Users must be able to block ads (and/or advertisers)

Users must be able to comment.

Campaign Creator must be able to see the quantity of the acceptable population.

Campaign Creator must be able to see the maximum value/cost of the Campaign (if all recipients took every available action).

Only paid once per action. If they watch the video ten times, they only get paid for one viewing of the video.

What happens if total ad spend is consumed? Edit & Replenish? Or **New Campaign**.

Campaign Statistics/Info.

My Understanding

1. Any KYC verified tiipstr users can create a Campaign by using Menu items under the profile picture.
2. Users should have a wallet created in tiipstr.
3. Users should fill-up the Campaign form (including the Ad content, Image or Video) and the desired amount to pay for the campaign. **Can the user be able to select the number**

of target users? Who should decide on the campaign time slot (Are there any criteria for selecting the timeslot...Users may choose a year or two...)

4. Users should be able to select the target audience (by using various parameters like rating, location, by profession..remaining parameters to be finalized.
5. Once a user submitted the campaign form, the Tiipstr Admin should be able to review the content and approve it.During the approval process, tiipstr Admin decide how much money will go to tiipstr Wallet and how much amount will go to tiipstr Ad Wallet (this wallet will be used to distribute the money to relevant participants).
6. Once the Campaign Creator got the approval, he can then transfer the money from his digital wallet to tiipstr account wallet (through Wallet to Wallet transfer option).
7. Once the payment is made by the Campaign Creator, then tiipstr admin the push the Ad content through tiipstr.
8. Selected tiipstr users received the ad content. Based on the Ad (viewing the image, video or View website through URL or filling the form about the Ad, etc....)
 - a. Users can share the Ad to other tiipstr user (the target tiipstr user may not be eligible to receive the Ad reward).
9. A scheduler will be running every 3 to 4 hours, to calculate the Ad reward amount for each eligible user and push the assigned amount from tiipstr Ad wallet to the individual user Wallet.
